

Using TechSmith Fuse App to Record Videos Outside of the Office

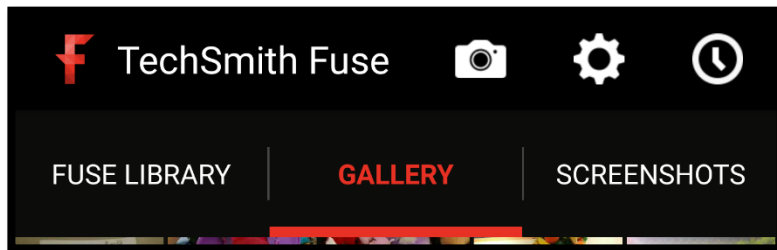

Want to record videos of objects or events outside of your office or home? Use the TechSmith Fuse app to record the video using your mobile device. Wirelessly send it to your TechSmith Account to add quiz questions & share the video.

1. Download the TechSmith Fuse App (free) on your mobile device (via your preferred app store)

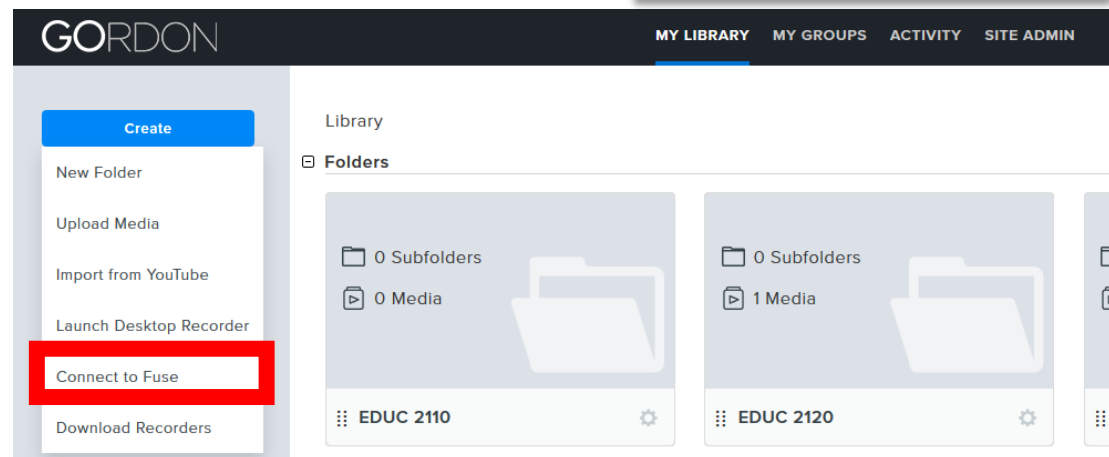

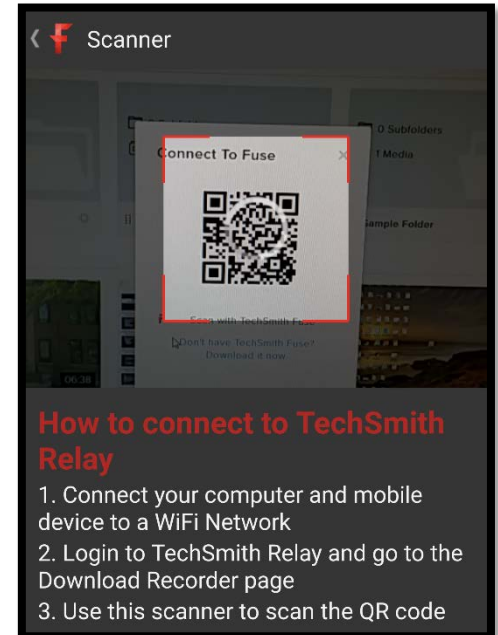

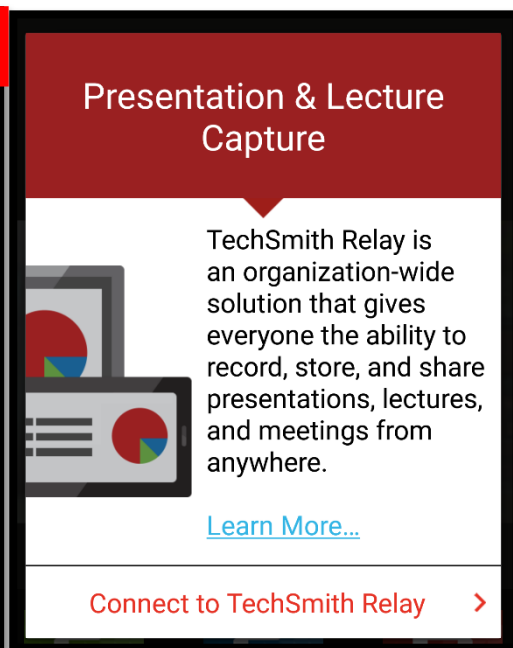

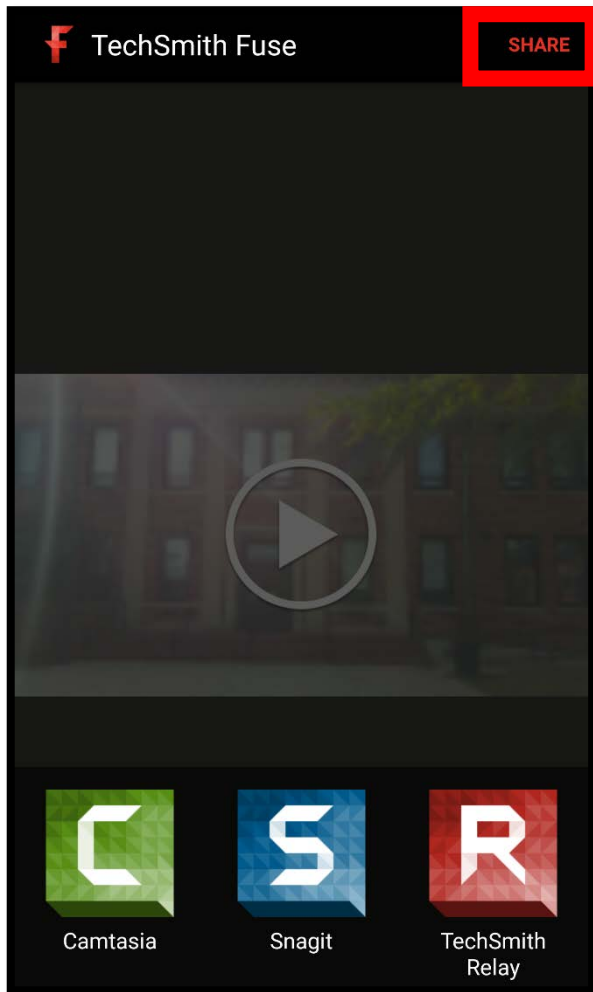

2. Record the video using the camera app on your mobile device. Open the Fuse App and choose "Library". Pick the video from the Gallery of your Camera.

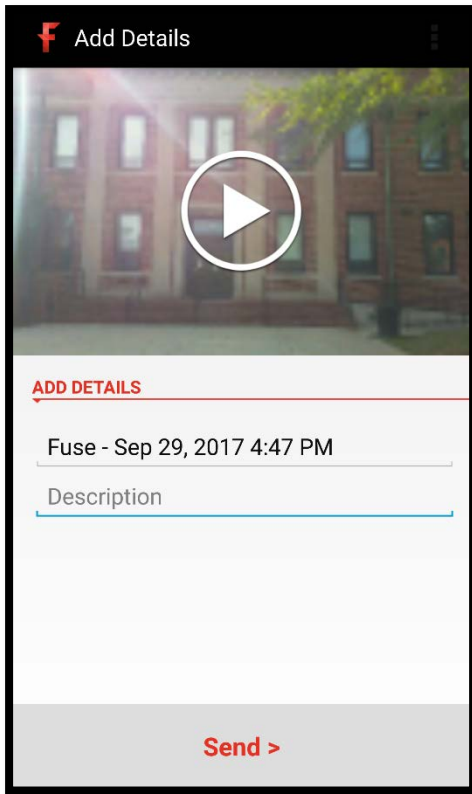

****Note: The video must be in one continuous clip. You can use the pause on your camera but if there are multiple clips you will need to merge them together with another app or program before inputting them into TechSmith Relay.**

3. Choose “Share” in the top right corner. Choose “TechSmith Relay”. You will be asked to connect to TechSmith Relay the first time you wirelessly connect.

4. Log into your TechSmith Relay account and choose “Create” on the far left side. Choose “Connect to Fuse”. Then scan the QR code on your computer screen with your mobile device to connect them.

5. Give your video a name and description. Choose to “send”. The video will begin sending wirelessly to your TechSmith account. This may take a little while. When it is finished loading into your account, you will receive an email and you will see it in your TechSmith account.

Now that the video is in your account, you can add quiz questions and share it with students.
